Project Title

AI-Powered Smart Visitor Management System

Introduction

Visitor management is an important process in offices, colleges, hospitals, and industries. Many organizations still use manual visitor registers, which are difficult to maintain and track.

To solve this problem, we developed an AI-Powered Smart Visitor Management System using ServiceNow.

Problem Statement

In the existing system:

- Visitor details are written manually.
- Records may be lost.
- No automatic approval process.
- No visitor tracking.
- No reports or analytics.

This creates security and management issues.

Proposed Solution

The proposed system automates visitor management using ServiceNow.

The system can:

- Register visitors digitally.
 - Generate Visitor ID automatically.
 - Validate visitor details.
 - Send email notifications.
 - Track visitor status.
 - Provide AI recommendations.
 - Generate reports and dashboards.
-

Objectives

Main Objectives

- Automate visitor registration.
 - Improve security.
 - Reduce paperwork.
 - Track visitors easily.
 - Generate reports automatically.
 - Use AI for visitor recommendations.
-

Technologies Used

Platform

- ServiceNow

Tools Used

- App Engine Studio
 - Flow Designer
 - Business Rules
 - Client Scripts
 - UI Actions
 - Reports
 - Dashboard
-

AI Feature

The AI Recommendation Engine suggests actions based on visitor purpose.

Examples

Purpose	Recommendation
Interview	Schedule HR Meeting Room
Delivery	Route to Security Desk

Purpose

Recommendation

Client Meeting Arrange Conference Room

Benefits

- Easy visitor registration.
 - Better security.
 - Automated email notifications.
 - Real-time visitor tracking.
 - AI-based recommendations.
 - Dashboard analytics.
-

Expected Output

Visitor Registration
