

5. Project Development Phase

Client Script

Purpose: Validate Mobile Number

```
function onSubmit() {  
  
    var mobile = g_form.getValue('mobile_number');  
  
    if(! /^[0-9]{10}$/.test(mobile)) {  
  
        g_form.addErrorMessage(  
            'Enter valid 10 digit number');  
  
        return false;  
    }  
  
    return true;  
}
```

This script checks whether the user entered a valid 10-digit mobile number.

The screenshot shows the ServiceNow interface for configuring a Client Script. The page title is 'Client Script - Mobile Validation'. A notification banner at the top states: 'New client-scripts are run in strict mode, with direct DOM access disabled. Access to jQuery, prototype and the window object are likewise disabled. To disable this on a per-script basis, configure this form and add the "Isolate script" field. To disable this feature for all new globally-scoped client-side scripts set the system property "glide.script.block.client.globals" to false.'

The configuration form includes the following fields:

- Name:** Mobile Validation
- Table:** Visitor Request [x_1877513_smart_0_vi...]
- UI Type:** Desktop
- Type:** onSubmit
- Application:** Smart Visitor Management
- Active:** ☒
- Inherited:** ☐
- Global:** ☒
- Description:** (empty text area)
- Messages:** (empty text area)
- Script:** A code editor containing the following JavaScript code:

```
1 function onSubmit() {  
2  
3     var mobile =  
4     g_form.getValue("mobile_number");  
5  
6     if(! /^[0-9]{10}$/.test(mobile)){  
7  
8         g_form.addErrorMessage(  
9             'Enter valid 10 digit number');  
10  
11         return false;  
12     }  
13  
14     return true;  
15 }
```
- Isolate script:** ☒

At the bottom of the form, there are 'Update' and 'Delete' buttons. Below the form, there is a 'Related Links' section with a link to 'Run Point Scan'.

Business Rule

Purpose: Generate AI Recommendation

```
(function executeRule(current){  
  
  if(current.purpose == 'Interview'){  
  
    current.ai_recommendation =  
    'Schedule HR Meeting Room';  
  
  }  
  
})(current);
```

This Business Rule automatically generates a recommendation when the purpose is Interview.

The screenshot shows the ServiceNow interface for configuring a Business Rule. The rule is named 'AI Visitor Recommendation' and is associated with the 'Visitor Request [x_1877513_smart_0_visto...]' table. It is active and advanced. The script is written in ECMAScript 2021 (ES12) mode. The script logic is as follows:

```
1 (function executeRule(current){  
2  
3   if(current.purpose ==  
4     'Interview')  
5  
6     current.ai_recommendation =  
7     'Schedule HR Meeting Room';  
8  
9   else if(current.purpose ==  
10    'Delivery')  
11  
12     current.ai_recommendation =  
13     'Route to Security Desk';  
14  
15   else if(current.purpose ==  
16     'Client Meeting')  
17  
18     current.ai_recommendation =  
19     'Arrange Conference Room';  
20  
21   else  
22  
23     current.ai_recommendation =
```

Below the script editor, there are 'Update' and 'Delete' buttons. Under 'Related Links', there is a link to 'Run Point Scan'. At the bottom, there is a 'Versions' table showing the current version of the rule.

Update Versions	Recorded at	State	Source	Reverted from
☐ sys_script_3203535583a9431098305b65eead336	2026-06-17 08:22:15	Current	Update Set: Default	(empty)

Flow Designer

Record Created

Action

Send Email Notification

Result

Visitor receives confirmation email automatically.

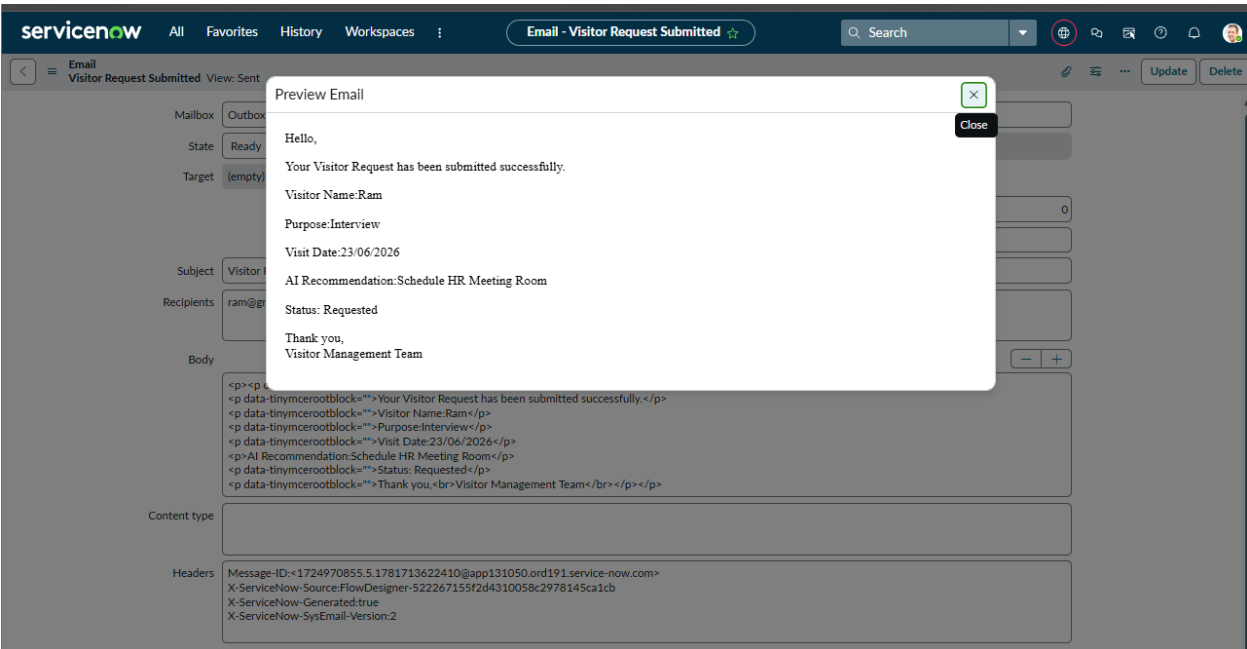

The screenshot shows the Workflow Studio interface for a 'Visitor Request Flow'. The flow is currently 'Active'. The main workspace is divided into three sections: TRIGGER, ACTIONS, and ERROR HANDLER. The TRIGGER section contains a single trigger: 'Visitor Request Created'. The ACTIONS section contains one action: 'Send Email'. The ERROR HANDLER section is currently disabled. On the right side, there is a 'Data' panel showing the flow variables and the data structure of the trigger and action. The trigger data includes 'Visitor Request Record' (Record), 'Visitor Request Table' (Table), 'Run Start Time UTC' (Date/Time), and 'Run Start Date/Time' (Date/Time). The action data includes 'email' (Record) and 'Action Status' (Object).

Section	Item	Type
Trigger - Record Created	Visitor Request Record	Record
	Visitor Request Table	Table
	Run Start Time UTC	Date/Time
	Run Start Date/Time	Date/Time
1 - Send Email	email	Record
	Action Status	Object

Email Notification

Subject: Visitor Request Submitted

Purpose: Inform the visitor that the request has been successfully created.

UI Actions

Check In

Changes visitor status to Checked In.

Check Out

Changes visitor status to Checked Out.
